

Measles Infection Timeline

Reminders for providers

- **Collect NP swab** if within **3 days** of rash onset
- Collect serum for serology testing (IgM, IgG)
- Tell patient to **self-isolate for 4 days** after rash onset
- **Do not use patient room for the next 2.5 hours** and disinfect room
- Report **immediately upon suspicion**

If you suspect measles, please contact the ISDH Epidemiology Resource Center immediately for **reporting** and **specimen authorization and testing**.
